ACKNOWLEDGMENT

By the profound joy that I have, I hereby thank the ALMIGHTY GOD for accompanying and protecting me all over these 2 years and for the strength and courage he has given to me ever since. Also the realization of this project would not have been possible without the intervention of the many people whom I want to thank sincerely:

- ❖ **Mr. NAFACK ALPHONSE** the founder of JFN-HUI for the great opportunity for receiving the opportunity of acquiring one of the best formations that he provides to us the younger generation.
- ❖ **Mme. NGWANI JECENTA BERI** my academic supervisor, for her supervision, the time and the guidance provided for me.
- ❖ **Mr. FECKOUNDO TCHINDA FABRICE** my professional supervisor, for his professionalism and his guidance in the development of the internship.
- ❖ **All the employees** of the group SOFT TECHNOLOGIES for their sympathy and their help throughout the internship program.
- ❖ **All my lecturers and classmates** for their mentorship and support since the beginning.
- ❖ **All my family members and friends** for their unwavering support and prayers on behalf of me from the beginning of my education. Their love and belief in me were a constant source of strength and motivation.

I am truly grateful to everyone who contributed to the success of this report. Your support and guidance have been invaluable, and I am proud of the work we have accomplished together.

ABSTRACT

This report is written on a two months internship carried out at Soft Technologies which is a professional training organization that offers such as Initiation to numerical economics and crypto currency, Analysis and implementation of Block chain projects, Active trading, Digital and community manager marketing, Blogging, Web redaction, Web development, Graphic design and branding, How to generate money online, Creation and management of an association/NGO, Network Installations and more. As an intern and an IT student I was focused in the domain of writing programs such as python, JavaScript, and HTML. Overwhelmed with the diversities of options in this institution, I came across an online common problem of one directional interactive online marketing, a situation where most existing apps give opportunities only to the seller to upload products online and buyers are only left with the option of buying. This inspired me to carry out a research entitled “DEVELOPMENT OF AN ONLINE REAL ESTATE SYSTEM” whose objective is to develop an online interactive system that solves the problem of unidirectional interaction above and creates a system of bidirectional online system where both the buyer and the seller can upload and interact on the platform equally and which also solves the problem faced by Cameroon Real Estate Industry. This report provides a comprehensive overview of the development process of an online real estate system. A system that will give the opportunity for both buyers and seller of online real estate to log into the system and either upload their products or interact and share ideas with other users of the application or system, create a user-friendly platform that facilitates the buying, selling and management of properties, thereby solving the problem of unidirectional uploading of products in this sector. The report delves into the various stages of the development process, from initial concept ideation to final implementation, highlighting challenges faced and strategies employed to overcome them.

It also provides an in-depth analysis of the outcomes of the system, including its impact on the industry, user feedback, and future prospects.

Ultimately, the report aims to contribute to the ongoing evolution of the real estate industry and inspire further innovation in the field of online real estate platforms.

RESUME

Ce rapport est rédigé sur un stage de deux mois effectué chez Soft Technologies qui est un organisme de formation professionnelle qui propose notamment : Initiation à l'économie numérique et à la crypto monnaie, Analyse et mise en œuvre de projets Block chain, Trading actif, Marketing digital et community manager, Blogging , Rédaction Web, Développement Web, Conception graphique et branding, Comment générer de l'argent en ligne, Création et gestion d'une association/ONG, Installations de réseaux et plus encore. En tant que stagiaire et étudiant en informatique, je me concentrais sur le domaine de l'écriture de programmes tels que Python, JavaScript et HTML. Submergé par la diversité des options proposées par cette institution, je suis tombé sur un problème courant en ligne de marketing en ligne interactif unidirectionnel, une situation dans laquelle la plupart des applications existantes donnent uniquement la possibilité au vendeur de télécharger des produits en ligne et les acheteurs n'ont plus que la possibilité d'acheter. . Cela m'a inspiré pour mener une recherche intitulée « DÉVELOPPEMENT D'UN SYSTÈME IMMOBILIER EN LIGNE » dont l'objectif est de développer un système interactif en ligne qui résout le problème de l'interaction unidirectionnelle ci-dessus et crée un système de système en ligne bidirectionnel où l'acheteur et le vendeur peut télécharger et interagir sur la plate-forme de manière égale et qui résout également le problème rencontré par le secteur immobilier camerounais. Ce rapport fournit un aperçu complet du processus de développement d'un système immobilier en ligne. Un système qui donnera la possibilité aux acheteurs et aux vendeurs de biens immobiliers en ligne de se connecter au système et soit de télécharger leurs produits, soit d'interagir et de partager des idées avec d'autres utilisateurs de l'application ou du système, de créer une plate-forme conviviale qui facilite l'achat. , vente et gestion de propriétés, résolvant ainsi le problème du téléchargement unidirectionnel de produits dans ce secteur. Le rapport examine les différentes étapes du processus de développement, depuis l'idéation initiale du concept jusqu'à la mise en œuvre finale, en soulignant les défis rencontrés et les stratégies employées pour les surmonter. Il fournit également une analyse approfondie des résultats du système, y compris son impact sur l'industrie, les commentaires des utilisateurs et les perspectives d'avenir. En fin de compte, le rapport vise à contribuer à l'évolution continue du secteur immobilier et à inspirer davantage d'innovation dans le domaine des plateformes immobilières en ligne.

PREFACE

JFN High-tech University Institute is a private university of excellence and innovation located at Santa Barbara after Bilingual Academic Group La Roche. It was founded next to the state degree of N° 22-02948/MINESUP/SG/DDES/SD-ESUP/SDA/AEO.

JFN High-tech University Institute is made up of three major schools:

- ❖ **The Higher School of Engineering (ESI)**
- ❖ **The School of Digital and Innovation (ENI)**
- ❖ **The School of Management and Entrepreneurship (EME)**

In partnership with **Google Cloud, QWASAR Silicon Valley, DUNIS, BEM Dakar, Cisco Networking Academy, Le Pole Universitaire Leonard de Vinci JFN High-tech University Institute** offers to their student a complete program. JFN-HUI also trained their candidates into domains such as

- ❖ **Preparatory classes**, for students who wishes to travel after two years at JFN to countries like France, India, United Kingdom (UK), USA, etc.
- ❖ **Bachelors programs**
- ❖ **Certifications**
- ❖ **Direct formation in LMD**
- ❖ **DUT**
- ❖ **Master degree**

JFN High-tech University is an Ultra-modern campus, with semi Olympic swimming poles, Basketball field, Football field, volleyball field, Student Hostels and an Amphy.

PART ONE: GENERAL INTRODUCTION AND INTERNSHIP HIGHLIGHT

GENERAL INTRODUCTION

INTRODUCTION

An internship is a professional learning experience that offers meaningful, practical work related to a student's field of study or career interest. An internship gives a student the opportunity for career exploration and development, and to learn new skills.

As professional career demands, each student has to undergo an internship program to a company of his/her domain and gain experience that will he/she will be needing in their career.

In order to accomplish this mission, I choose **SOFT TECHNOLOGIES** as my internship study institution. Soft-Technologies carries out a lot of activities within its institution. I as an IT student I was focused in the domain of writing programs such as python, JavaScript, and HTML. As a student on research, I was also interested in the other aspects of the institution such as; Active trading, Digital and community manager marketing etc. At this point, I was attracted with their online marketing activities, where I discovered a common problem that most online sellers or E-commerce buyers encounter worldwide and in Cameroon in particular where **The Cameroon Real Estate** industry is facing and which poses a situation that users or buyers cannot post but will only buy what online bloggers have posted. The current real estate sector lacks a centralized, efficient, interactive and accessible platform for property transactions. This leads to limited access to available properties and a lack of transparency in the buying selling and renting process. As a result, there is a need for a digital solution that can streamline property transactions, improve accessibility to available properties and provide a platform for real estate agents, landlords and individuals to showcase their properties to a wider audience.

As a solution to this problem, I was inspired to come up with a project entitled **The Development of an Online Real Estate System**.

With the increasing use of digital platforms and the internet, online real estate systems have become an integral part of the buying and selling process. These systems offer numerous benefits to users including convenience, accessibility, efficiency, transparency, cost-effectiveness, global reach and security. By exploring and analysing these advantages, the report aims to provide insights into the significance of online real estate systems in today's market and their potential impact on the

industry as a whole. Additionally, the report will also address any potential challenges or drawbacks associated with these systems to provide a comprehensive understanding of their role in the real estate sector. Thus, for the implementation of this my project; **The Development of an Online Real Estate System is to develop** a functional and interactive online real estate system and application that will permit both parties to post and interact in the platform without only one party being the buyer while the other buys on.

In order to better elaborate the development of this project, it is divided into two parts with two chapters each. **Chapter one**, which is the presentation of the internship and project environment. **Chapter two**, which is the progress of internship activities and organizational analysis, **Chapter three**, which is a diagnosis of the existent system found on the field, **Chapter four**, which are the proposed solutions and implementations.

OBJECTIVES OF THE INTERNSHIP

The main reason why I carried out this internship was not only for the HNG purpose but also to acquire more knowledge and face the enterprise world. Some of the objectives for carrying out internship are:

- ❖ **Professional Development:** Internship gives students the ability to develop professional skills like teamwork, problem solving and time management, thus giving them the chance to work with professionals and gain experience.
- ❖ **Gain Practical Experience:** The primary objective of an internship is to provide practical experience in the field of study. This allows the student to apply the knowledge learned in real world situations.
- ❖ **Career Exploration:** Internship provides the opportunity to explore different career paths within the field of study. This helps the student in making wise and informed decisions about future career goals and aspirations.

CHAPTER ONE: PRESENTATION OF THE INTERNSHIP AND PROJECT ENVIRONMENT

This chapter is divided into two sections. **Section 1**; presentation of the company and **section 2**; organization of the enterprise charts.

SECTION 1: GENERAL PRESENTATION OF THE COMPANY

1.1. GENERAL OVERVIEW

Soft Technologies is a professional training organization that offers such as Initiation to numerical economics and crypto currency, Analysis and implementation of Block chain projects, Active trading, Digital and community manager marketing, Blogging, Web redaction, Web development, Graphic design and branding, How to generate money online, Creation and management of an association/NGO, Network Installations and more.

1.1.1. CENTER VISION

Soft Technologies has a better preparation of young people for employability, entrepreneurship and availability for all of a professional retraining

1.1.2. MISSION

As part of projects, Soft Technologies trains people and find markets after training. After training, Soft Technologies takes the charge and supports these people interested to find markets on which they can work.

TABLE 1: Identification Slip

1.1.3. VALUES

Soft Technologies has a better preparation of young people for employability, entrepreneurship and availability for all of a professional retraining.

- ❖ Promote employability
- ❖ Promote entrepreneurship
- ❖ Improve professionalism

SECTION 2: ORGANIZATION OF THE ENTERPRISE CHART

1.2. ORGANIZATION

Soft Technologies as many other institutions has an organizational chart. This is in order to ease the achievement of their goals through the division of labour. By this, employees are shared to various departments having a supervisor.

1.2.1. STRUCTURAL ANALYSES

Soft Technologies exercises its services in a dependent way with the supervisor of the state which is represented by the Minister of Small and Medium Enterprises.

1.2.2. FUNCTIONAL ANALYSES

Within it, Soft Technologies is committed to the voice of decentralized tasks in order to be close to young entrepreneurs and workers and provide them with effective services.

1.2.3. CHAIRMAN AND CEO

He is responsible for the supervision, management and coordination of overall operations. Which include, delegating and directing agendas, driving profitability, managing company organizational structure, strategy and communicating with the board.

1.2.4. SECRETARY/ACCOUNTANT

The principal responsibility of the position is to maintain the unity and organizational effectiveness of the company's movement as a whole while driving forward a program of renewal, and to advance its social and economic program.

The secretary accountant must have experience at a senior leadership level preferably within the company. Also, performs financial functions related to the collection, accuracy, recording, analysis and presentation of a business, organization or company's financial operations...

Generally, the secretary accountant can also deal with the third parties, such as vendors, customers and financial institution such as Expression Union.... Staff accountant responsibility is to meet with clients to discuss their financial matters, such as real property, equipment and tax liability.

1.2.5. THE PERSON IN CHARGE OF THE DIGITAL COMMUNICATION

Its responsibility is to oversee the development and publishing of all digital communications content. He also assists the online campaigns, promoting the company's products and goals to the public, either as part of a specific campaign or on a holistic level.

In general, a digital communication manager has the duty to manage a company's website or blog, associating with content creation (e.g., photography, graphic design, charts, polls, scripts...) analysing relevant data and metrics, identifying new technologies and trends. Most digital communication managers work weekdays in an office setting.

1.2.6. WEB DEVELOPPER

It has as function to ensure websites to look good and function properly. Web developers collaborate with website and graphic designers.

In general, the role of a web developer it to design, create and maintain websites, providing in the process a cohesive and user-friendly online portal for the use of clients, customers, work colleagues and other interested parties.

1.2.7. THE TRAINERS

A trainer trains learners face-to-face or at a distance. He/she presents pedagogical content, offers activities and gives feedback to its learners.

The trainer must be enthusiastic and fool proof dynamism at every test. He is the first motivator of his learners and believe in his training. No matter the subject of the training, nor the general conditions, he must always be positive (through is smile) it's very important.

1.2.8. THE ORGANIZATION ORGANIGRAM

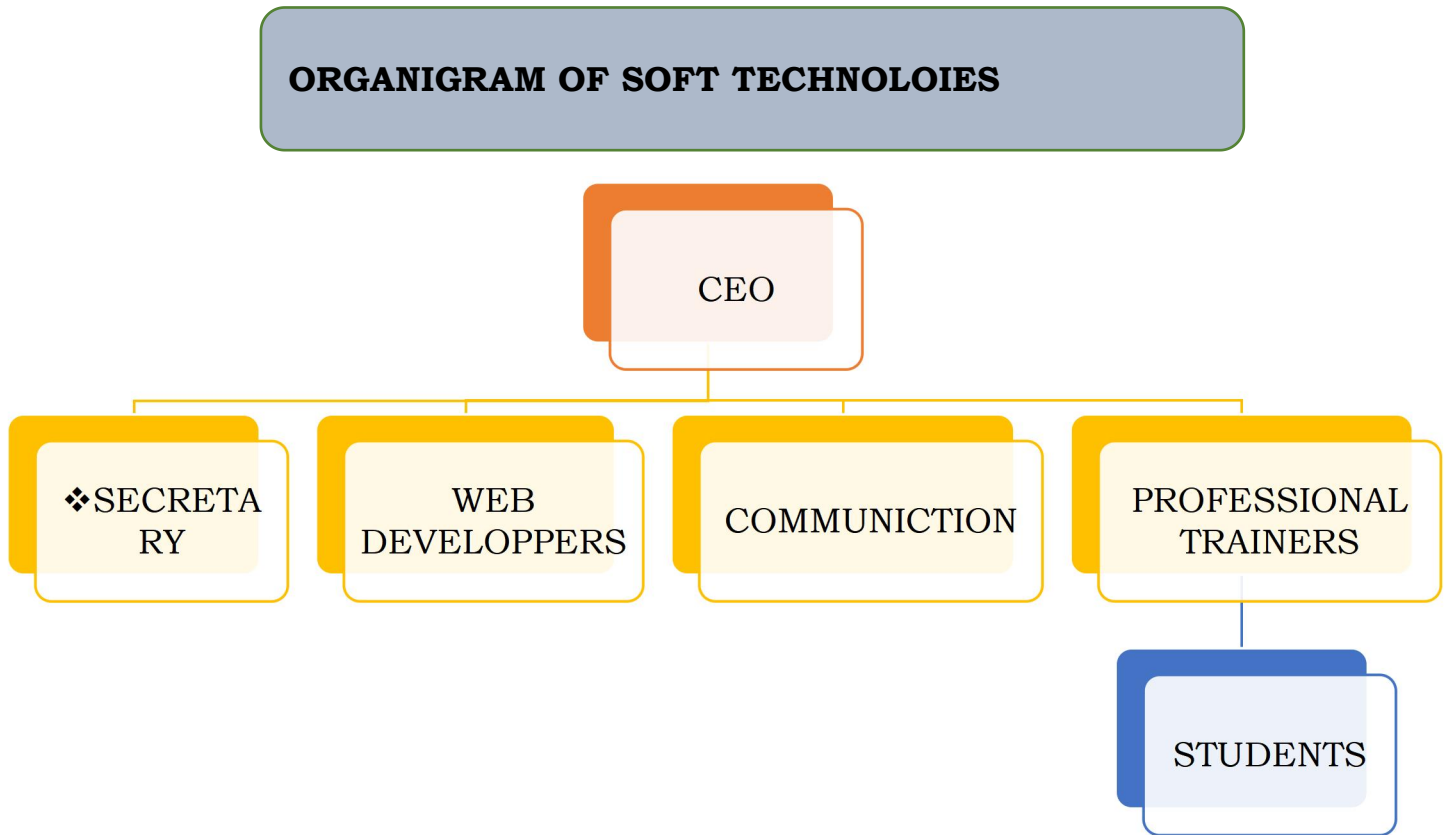

FIGURE 1: Organigram of Soft Technologies

1.3. PRODUCTS OF THE COMPANY AND ITS CLIENTS

Soft Technologies has a lot of services it renders to clients which could be explained below:

❖ PUBLICITY

In terms of publicity, Soft Technologies uses the different social media to advertise its different products. Also, to let them understand that they could feel at home bringing in their problems this will definitely be heard and answered and by making great opportunities for the young and dynamic entrepreneurs.

CHAPTER TWO: PROGRESS OF INTERNSHIP ACTIVITIES AND ORGANIZATIONAL ANALYSIS

2.1. PRESENTATION OF THE CENTER

Get an authentic certificate both by Soft Technologies and by expert partners who are supporting in order to offer excellent qualities of the courses. The educational approach of Soft Technologies relies on:

- ❖ **A career approach:** Soft Technologies accompanies in the development of your skills in order to ensure you find a job or improve you in a professional environment.
- ❖ **An entrepreneurial approach:** Soft Technologies has through available course modules on platforms, skills allow you to become an argue and warned entrepreneur.
- ❖ **A digital approach:** Soft Technologies is available to the learners, digital tools to facilitate their learning.

2.1.1. PILLARS

Soft Technologies has three pillars which relies on,

- ❖ Entrepreneurial spirit
- ❖ Creativity
- ❖ Professional competence
- ❖ Teach people how to block their time

2.1.2. RESOURCES

Every resource is defined with a set of attributes. The attributes are the properties of the resource. The resource of Soft Technologies includes;

2.1.2.1. HUMAN RESOURCES

Soft Technologies by qualified personnel who devote their time and energy to the smooth functioning of the company. This includes:

- ❖ THE CEO
- ❖ SECRETARY/ACCOUNTANT

- ❖ WEB DEVELOPPER
- ❖ PERSON IN CHARGE OF THE DIGITAL COMMUNICATION
- ❖ PROFESSIONAL TRAINERS

2.1.2.2. MATERIAL RESOURCES

Soft Technologies has two large offices, one located at Bonaberi and the second office located at Deido. The various material resources include;

- ❖ Air-conditioned offices of which (one reception room, two meeting rooms, computer equipment's).
- ❖ One reception room made for the Secretary/Accountant.
- ❖ Two meeting rooms, one meeting room for the CEO and the last meeting room to receive people for training.

2.1.2.3. FINANCIAL RESOURCES

Soft Technologies owns its funds from the training fees/tuition and the financing of the banks and personal savings

2.2. WEEKLY ACTIVITIES

The internship was carried out for a period of two months from the 1st of July to the 31st of August 2023, from 8am to 2pm, Monday to Friday. Summary records of activities taken on a weekly basis is as follows:

WEEKLY	ACTIVITIES PERFORMED	DIFFICULTIES ENCOUNTERED	SOLUTION PROPOSED
WEEK-ONE	Introduction to company and other members. We started to format and put anti viruses in our machines. Installation of Anaconda and python.	No measure problem was encountered.	No problem hence no solution.

WEEK-TWO	Introduction to python. Python functions Python functions declarations. Creating a function in python. Calling a python function.	No measure problem was encountered.	No problem hence no solution.
WEEK-THREE	Python function with parameters. Python function arguments. Python function within functions.	No problem was encountered.	No problem hence no solution.
WEEK-FOUR	Anonymous functions in python. Return statement in python function. Pass by reference and pass by value.	No problem was encountered.	No problem hence no solution.
WEEK-FIVE	OOP in python. Deep learning with YOLO(You Only Look Once).	Difficulties in coding.	Watching tutorials on YOUTUBE channel.
WEEK-SIX	Introduction to web programming. Structuring a web page with CSS using Visual Studio Code.	No problem was encountered.	No problem hence no solution.

WEEK-SEVEN	We started doing Projects in web programming.	No problem was encountered.	No problem hence no solution.
WEEK-EIGHT	Installation of XAMP. Introduction to PHP.	Coding in the language.	Watching tutorials on YOUTUBE channel and downloading notes on PHP.
WEEK-NINE	Some projects were given.	Unable to do some projects.	Watching tutorials on YOUTUBE channel.

TABLE 2: Weekly Activities of the Internship Program

2.3. DESCRIPTION OF TASK/PROJECTS ASSIGNED

2.3.1. TASK ASSIGNED

During my two months internship there were some many tasks that were assigned to me such as pharmacy on call, designing of logo, develop a website. This is a summary of a few tasks I performed:

- ❖ Writing weekly report from the beginning of every week
- ❖ Learn PHP
- ❖ Learn how to analyse a project
- ❖ Submit weekly report to my professional supervisor
- ❖ Learning of PYTHON

2.3.2. PROJECT ASSIGNED

After the first week we were assigned to some project we were put in groups, my group's project was to build a face recognition app which is a software application or library that utilizes computer vision and machine learning algorithms to identify and verify individuals based on their facial features. After a period of one month, we were able to finish the project and the software app was tested and our supervisor said it was perfect.

The difficulty I encountered was in the learning process. I had to learn a new programming language (PYTHON) where I did not have a background on. But with some research and hard work, I now understand more under that programming language.

2.4. ORGANIZATIONAL ANALYSIS

To analyze the performance of soft technologies and explicitly their quality and the way of managing resources, analyses, indicators, and tools are used. The SWOT analysis is a method used for obtaining an overview of an institution by assessing internal and external factors that affects the institution and allow. Highlighting its strength and weaknesses on relation to the opportunities and the threats existing in the institutional environment. Thus, an important tool in the appreciation of SOFT TECHNOLOGIES is the SWOT analysis that identifies the strengths, the weaknesses, the opportunities, and the threats of SOFT TECHNOLOGIES.

2.4.1) SWOT ANALYSIS OF THE ORGANIZATION

A) STRENGTH:

These are the things that the company does particularly well. For the case of Soft Technologies, the following are their strength points

- ❖ Dynamism and youthfulness of the entire service
- ❖ Sharing of knowledge and professional experiences
- ❖ Job segmentation
- ❖ Friendly environment

B) WEAKNESSES:

- ❖ High manual implementation
- ❖ No proper organization of interns
- ❖ Lack of digitalize systems

C) OPPORTUNITIES THAT FAVOR THE COMPANY EFFECTIVENESS AND PRODUCTIVITY:

- ❖ Young employees
- ❖ Effective productive of employees
- ❖ High quality job offering to clients
- ❖ Implementation of social media platforms to help clients improve their experiment.

D) THREADS:

- ❖ Low remuneration of employees making competitors to have access to them
- ❖ Lack of digitalize ways to facilitate the working conditions of employees.

2.5. IDENTIFICATIONS OF MAIN PROBLEMS AND SOLUTIONS**2.5.1. PROBLEMS**

- ❖ Use of paper to collect some information like the arrival time, departure time, etc.
- ❖ They don't have an online platform
- ❖ Communication among the members of the organization is no secured.

2.5.2. SOLUTIONS

- ❖ Creating a digitalized software platform where employees' information will be recorded. (They were working on the development of the platform).
- ❖ Creating an online platform for the advertisement of their products.
- ❖ They should work on a platform for their company where they will be able to communicate internally with the members of the organization.

2.6. CONCLUSION

SOFT TECHNOLOGIES is one of the best, if not the best in the service domain they offer here in Cameroon. They offer the best services and have the best trained personnel working for them. For interns like us students, it is the best company to gain professional experience on your future career. Since they have different branches such as: Digital and community manager marketing, Blogging, Web redaction, Web development, Graphic design and branding, Creation and management of an association/NGO, Network Installations and more. Students will easily find a branch that will suite him/her provided the student is an IT student. I really enjoyed having my 02 months of internship there. They were very friendly and helped me a lot.

PART TWO: THE DESIGNS AND DEVELOPMENT OF THE INTERNSHIP, CASE OF CAMEROON'S REAL ESTATE SECTOR WITH ITS OUTCOMES

This part is divided into two chapters. Chapter three (containing the designs and development of the internship; case of Cameroon's Real Estate Sector and chapter four containing the outcomes or achievements of the project.

CHAPTER THREE: CRITICAL ANALYSIS (CASE STUDY)

3.1. CRITICAL ANALYSIS OF THE IDENTIFIED PROBLEMS

3.1.1. INTRODUCTION

In a software development process for the implementation of an ONLINE REAL ESTATE SYSTEM, two fundamental questions need to be answered; what are the system features? Who will use the system?

3.1.2. PROJECT'S BACKGROUND

The development of an online real estate system can yield several significant advantages leading to the modernization of the real estate sector. This platform will improve transparency within the real estate market by facilitating access to accurate property information. This transparency promotes trust among buyers, sellers and real estate professionals, ultimately strengthening the integrity of the real estate market.

The system will enable convenient property searches, simplified listing procedures and streamlines property transactions, increasing accessibility for potential buyers and renters. In this way real estate agents and professionals benefit from access to a centralised digital platform for property listings, client management and lead generation.

This will be a great move in the modernization of the Cameroon's real estate sector since many things related to online stuffs are not that reliable, secured and in accordance with the law. The online real estate system is thus created to solve these problems

3.1.3. PROBLEM STATEMENTS

The traditional real estate market, reliant on physical interactions and manual processes is often characterized by;

- ❖ **Inefficiency:** Searching for properties and managing listings can be time-consuming and resource-intensive.
- ❖ **Limited Accessibility:** Access to information can be limited by geographical location and reliance on real estate agents.
- ❖ **Lack of Transparency:** Information asymmetry can exist, making it difficult for buyers and sellers to access accurate and comprehensive details.
- ❖ **Communication Challenges:** Coordinating communication between buyers, sellers and agents can be cumbersome and prone to delays.

3.1.4. IDENTIFICATION OF TERMS RELATING TO STUDIES

- ❖ **HTML:** It stands for Hypertext Markup Language and is the code that is used to structure a web page and its content.
- ❖ **CSS:** It stands for Cascading Style Sheet and is used style the content on a web page.
- ❖ **PHP:** It stands for Hypertext Processor and is the programming language used to connect a web site to a database.
- ❖ **Star UML:** It is the software used to draw UML diagrams.
- ❖ **XAMPP:** It is a free and open-source web server solution stack package.
- ❖ **MySQL:** MySQL is an open-source relational database management system. Its name is a combination of “My”, the name of co-founder Michael Widenius’s daughter, and “SQL”, the abbreviation for Structural Query Language.
- ❖ **SDLC:** It stands for Software Development Lifecycle is a process used by the software industry to design, develop and test high quality software. The SDLC aims to produce high-quality software that meets or exceeds customer expectations, reaches completion within times and cost estimates.
- ❖ **SQL:** It is a structure query language use to develop a database.
- ❖ **Text Editor:** It is a software tool (IDE) where HTML, CSS, BOOTSRAP, PHP and other programming syntaxes are written.
- ❖ **Use case diagram:** A use case diagram is a representation of a user’s interaction with the system that allows the relationship between the users and the different use cases in which the user is involved.
- ❖ **Methodology:** Methodology is a method used in a particular area of study or activity to achieve the set objectivities.

3.2. DETAILED DESCRIPTION OF THE PERSPECTIVE CARRIED OUT RELATED TO PROBLEM STATEMENT

3.2.1. METHODOLOGY TO THE STUDY

Methodology is a method used in a particular area of study or activity. This section describes the methods chosen to achieve the objectives, together with the development of the system operation, process, and testing. It also discussed the architectural diagram interface of hardware and software specification. Throughout the project development after conducting the interviews and research regarding the proposed system, the methods that will be applied to achieve the specific objectives are namely: literature review, oral interviews, research design, system analysis, system design, data modelling and system testing.

3.2.1.1. SYSTEM DEVELOPMENT LIFE CYCLE (SDCL)

SDLC is a term used in information system and software engineering. Software development life cycle is a diagrammatic and descriptive representation of a software life cycle. A life cycle model marks the different activities performed on a software product from its inception to its retirement. The SDLC framework includes the following steps; **Requirement analysis, defining requirements, designing, coding, testing, implementation/deployment and maintenance** depending on the methodology used.

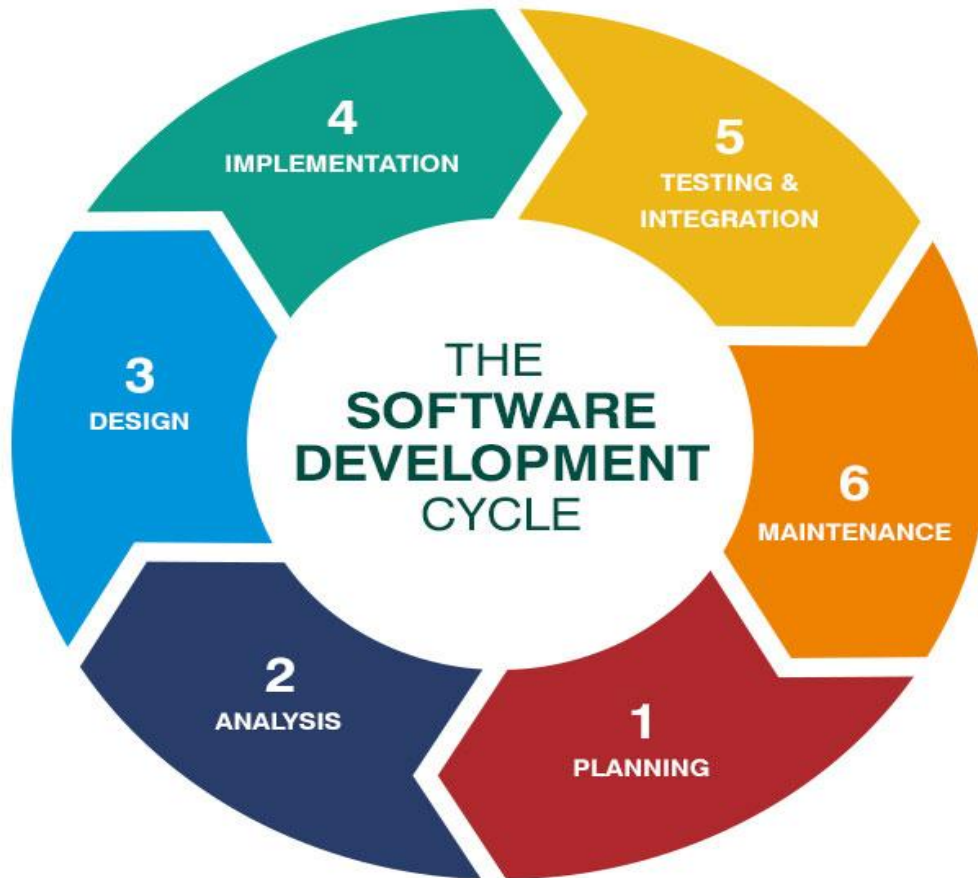

FIGURE 2: Software Development Life Cycle (SDLC)

3.2.1.2. DEVELOPMENT METHODOLOGY

The software development life cycle has many models and each model follows a series of steps unique to its style in order to ensure success in a process of software development. For the conception of this project, I used the **Agile Model**. The agile model is an iterative and incremental approach to software development that emphasizes flexibility, collaboration and continuous improvement, that is when requirements may evolve or where there is a need to adapt to changing user needs and market trends.

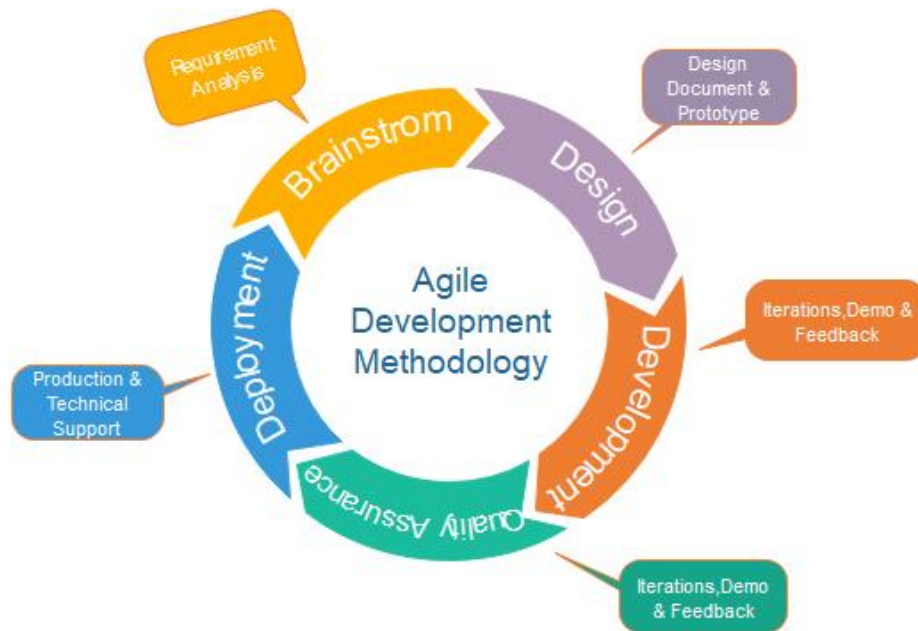

Fig. Agile Model

FIGURE 3: Agile Model

3.2.1.3. PHASE METHODOLOGY

1. Requirements gathering: In this phase, you must define the requirements. You should explain business opportunities and plan the time and effort needed to build the project. Based on this information, you can evaluate technical and economic feasibility.

2. Design the requirements: When you have identified the project, work with stakeholders to define requirements. You can use the user flow diagram or the high-level UML diagram to show the work of new features and show how it will apply to your existing system.

3. Construction/ iteration: When the team defines the requirements, the work begins. Designers and developers start working on their project, which aims to deploy a working product. The product will undergo various stages of improvement, so it includes simple, minimal functionality.

4. Testing: In this phase, the Quality Assurance team examines the product's performance and looks for the bug.

5. Deployment: In this phase, the team issues a product for the user's work environment.

6. Feedback: After releasing the product, the last step is feedback. In this, the team receives feedback about the product and works through the feedback.

3.2.1.4. REASONS FOR CHOOSING THIS SDLC MODEL

- ❖ **Adaptability to Evolving Needs:** Real estate features and functionalities can shift based on market trends or user feedback. Agile's iterative approach allows for incorporating these changes quickly through ongoing sprints.
- ❖ **Early Feedback and User Input:** Agile's focus on frequent releases enables early user testing. This allows you to gather real-time feedback on features like search filters, property listings, or agent profiles, and iterate based on user preferences.
- ❖ **Prioritization and Flexibility:** In an online real estate system, some features might be more crucial than others. Agile's prioritization process allows you to focus on core functionalities first and address less critical aspects later.
- ❖ **Reduced Risk and Faster Time-to-Market:** By breaking down development into smaller chunks, Agile minimizes the risk of building features that users don't find valuable. Additionally, frequent releases allow you to get a minimally viable product (MVP) out to the market faster and gain user traction.
- ❖ **Complex Requirements Management:** Online real estate systems often juggle complex requirements from agents, brokers, and potential buyers/sellers. Agile's focus on continuous communication and collaboration between stakeholders helps manage these complexities effectively.

3.2.2. SPECIFICATION SHEET

A. PROJECT DESCRIPTION:

Here is a presentation of the ONLINE REAL ESTATE SYSTEM will be made which will explain the purpose and features of the software will do, the constraints under which it must operates and how the software will react to external stimuli. This document is intended for both end user and developers of the software.

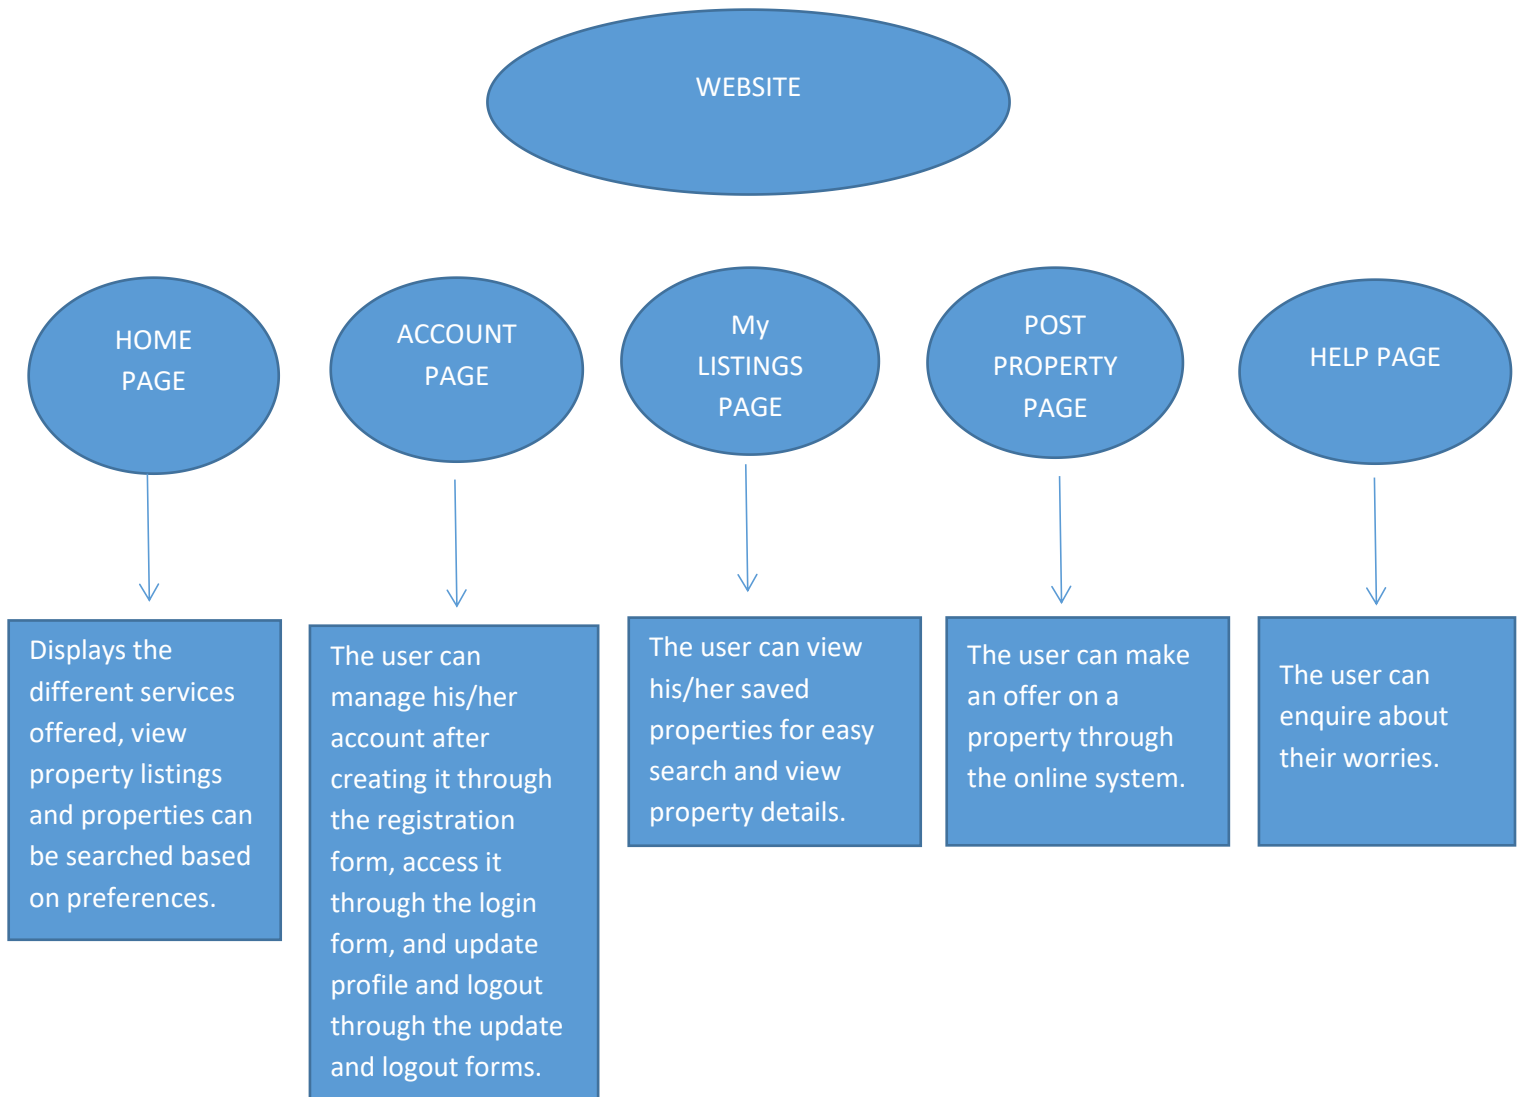

FIGURE 4: Web User Diagram

3.2.3. SYSTEM ANALYSIS

This section will discuss and analyse about the developing process of intern service system including software requirement specification (SRS). The functional and non-functional requirements are included in SRS part to provide complete description and overview of system requirement before the developing process is carried out.

B. SYSTEM REQUIREMENT SPECIFICATION (SRS):

❖ SYSTEM OBJECTIVE:

The main objective of the system is to propose and outline the development of a digital platform tailored to the needs, challenges and opportunities within the Cameroon real estate market, thus modernizing its real estate sector.

❖ PROPOSED SYSTEM:

The proposed system aims to revolutionize the way properties are bought, sold and rented. By providing a user-friendly platform with advanced features and security measures, the system will enhance accessibility and transparency in the real estate market, ultimately benefiting both the buyers and the sellers.

❖ SYSTEM REQUIREMENT:

The system requirement provides a clear articulation of the functional and non-functional requirements for the development of the online real estate system, which is detailed below.

FUNCTIONAL REQUIREMENTS

- The website shall enable users to search and filter properties based on price, type and other relevant criteria.
- The website will serve as a platform for real estate clients and providers to register, verify and manage property listings, including detailed description.
- The system shall facilitate secure user registration, login and authentication mechanisms to manage user interactions and data confidentiality.
- The system shall support user notifications for new property listings, price changes and other relevant alerts.
- The system shall incorporate features that allow users to provide feedbacks.

NON-FUNCTIONAL REQUIREMENTS

- Security and Data Privacy: security requirements are important factors in this system as classified data will be stored in the database. Login and signup with email verification.
- Scalability and Performance: the system shall be designed to accommodate an expanding property database, maintaining optimal responsiveness.
- Usability and Accessibility: the system shall be intuitively designed with a user-friendly interface with accessibility considerations.
- Deliverables: the expected deliverables of this project are as follows;
 - The design system
 - The source code
 - Studying of existing database
 - The user manual
 - The analysis workbook

❖ CONSTRAINTS:

OPERATING CONSTRAINTS

The application must be accessible without installation from all client workstations. The administrator should hence access to all operations assigned through an administration interface. The use of the application will only take place after the user creates an account on the platform through the registration form.

TECHNICAL CONSTRAINTS

The application will be usable in a web version (web application) based on a client /server architecture. The development tools and platform will be the following;

- Development environment : Visual Studio, StarUML
- Development languages: PHP, HTML, CSS, Java Script
- Database engine: MYSQL server
- Microsoft office tools: Word, PowerPoint
- A database manager: php MyAdmin
- HDD capacity: 614GB
- Processor: Intel(R) Core(TM) i5-6200U CPU @ 2.30GHz 2.40 GHz
- RAM capacity: 8GB

3.2.4. DESIGN (MAIN ACTORS OF THE SYSTEM, USE CASE DIAGRAM, CLASS DIAGRAM)

3.2.4.1. FUNCTIONAL ANALYSIS

Generally speaking, the functional analysis of the system allows creating a framework which allows future users to communicate and interact between each other's. Such an analysis is carried out with the use of use case diagrams that allows you to collect, analyse, to organize the needs, identify the main functionalities of the system to be automated. In a practical way it describes the studied system from a user's point of view (in the form of actors and system reactions).

The objectives of such analysis are as follow;

- Identifying the different system users.
- Identifying the different interactions existing between the users and the system.
- Delineate the user's real concerns without presenting an implementation.

❖ USE CASE DIAGRAM:

A use case is a set of scenarios that describes an interaction between a user and a system. A use case diagram displays the relationship among actors and use cases. The two main components of a use case diagram are use cases and actors.

ACTOR

FIGURE 5: Use Case Diagram

An actor represents a user or another system that will interact with the system you are modelling.

A use case is an external view of the system that represents some actions the user might perform in order to complete a task.

A. IDENTIFICATION OF ACTORS

It involves clearly highlighting the entities involved in the webpage.

Main actors;

- The administrator
- The web user
-

B. IDENTIFICATION OF USE CASES

Part of Admin;

- Signup
- Login
- Manage Database
- Publish and manage notifications
- Logout

System Web User;

- Visiting the home page
- Signup
- Login
- View Property Listings
- Post Properties
- Update Account
- Logout

C. TEXTUAL DESCRIPTION OF USE CASES

The purpose of this step is to provide more details on the dialogue between the actor and the use case. A commonly used textual description consists of two parts;

The summary: This first part identifies the case. It must contain the following information:

- Name: Use an infinitive tense.
- Purpose: A summary description to understand the main purpose of the software.
- Main actors: Those who will carry out the use case.
- Secondary actors: Those who only receive information after the realization of the use case.
- Dates: The dates the current description was created and updated.
- Responsible: The names of the persons in charge.

- Version: The version number.

Nominal Scenario: This second part contains the description of the operation of the case in the form of a sequence of messages exchanged between actors and the system. It always contains a nominal sequence that describes of the normal course of the case.

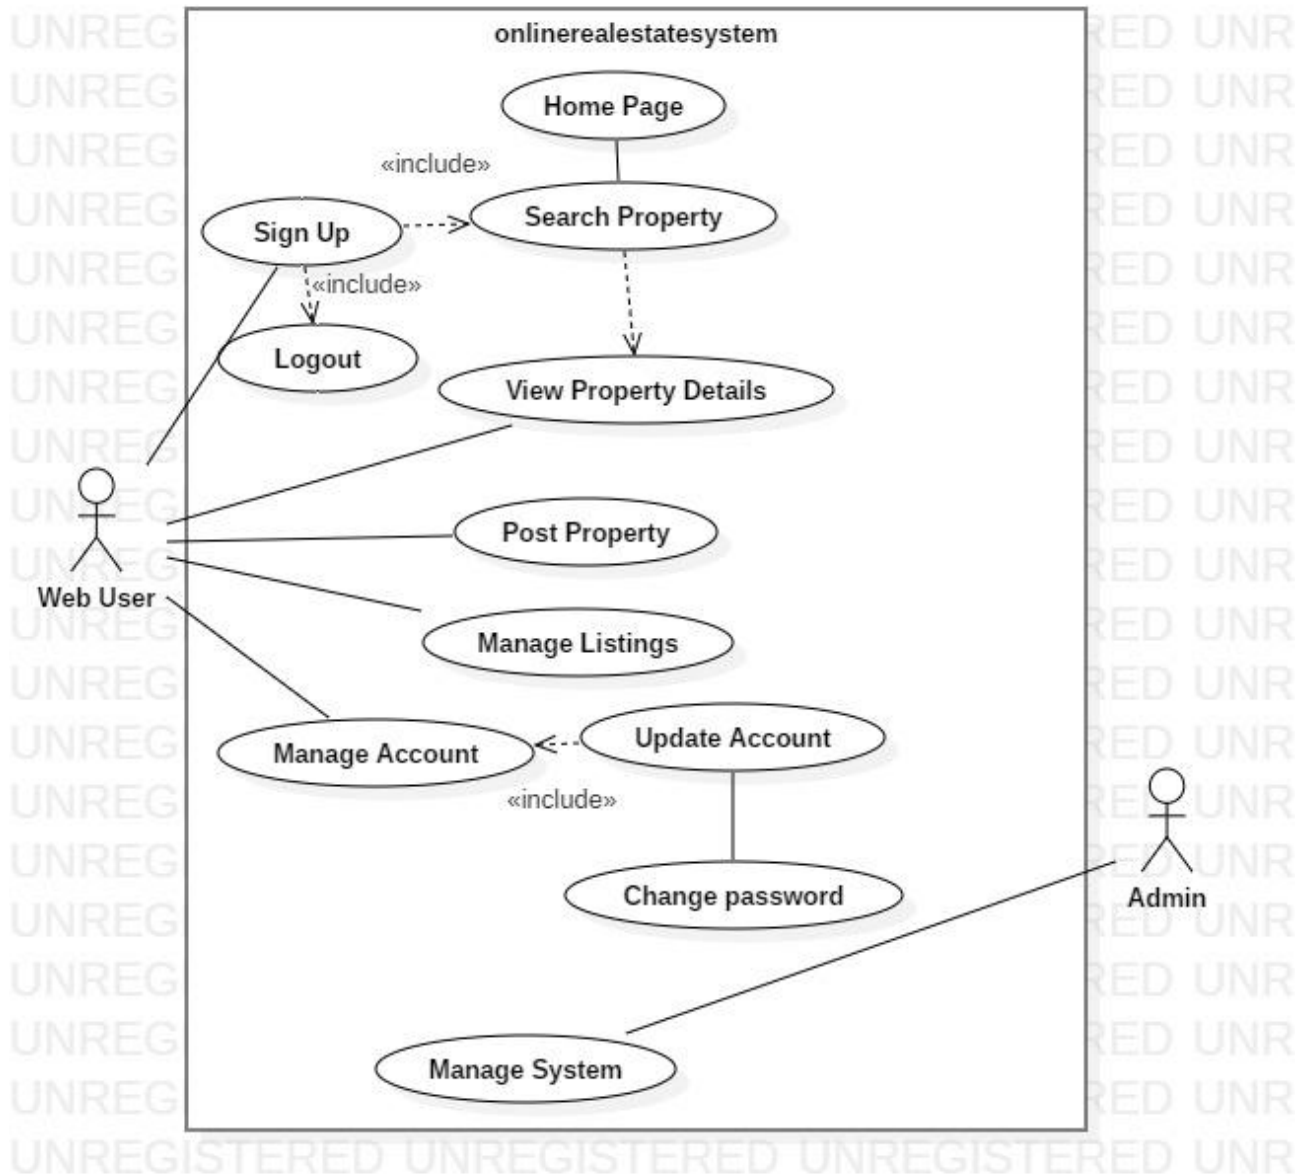

FIGURE 6: Web User Use Case Diagram

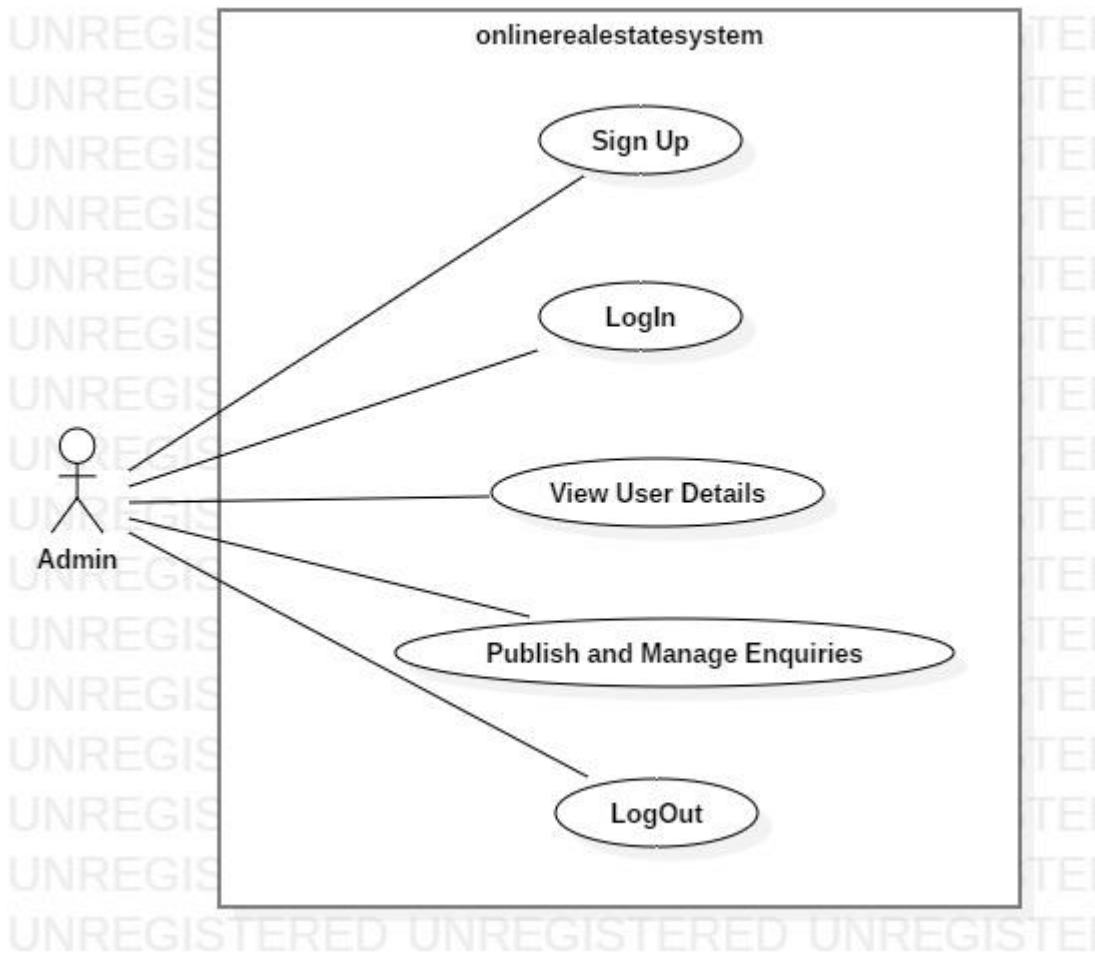

FIGURE 7: Admin Use Case Diagram

3.2.4.2 STATIC ANALYSIS

The objectives of such an analysis are to provide an abstract representation of objects of the system that will interact to realize use cases. To carry out this analysis, UML modelling has set up the class diagram: Only mandatory during such modelling.

❖ CLASS DIAGRAM

A class diagram shows the internal structure of the system. This is a static analysis, because the time factor is not taken into account in the behaviour of the system. The class diagram models the concepts of the application area as well as those internal concepts created from scratch as part of the

implementation of an application. The implementation of such an analysis, centred on the internal structure of the system, requires a good mastery of certain concept.

➤ Concepts of A Class Diagram

Name	Description
Class	A class is a generic representation of objects having the same state and the same behaviour.
Object	An object is an instance of a class. It is an entity with an identity, state and behaviour that can be involved.
Instance	An instance is a concretization of an abstract concept
Attributes	Elementary properties of a class and for which each object of the class has a value
Identifier	A particular field that uniquely characterizes an occurrence of a class object
Behaviour	Functions applicable to objects of a class that can take input values and modify attributes or produce results
Association	An association is a relationship between two classes or more, which describes the connections between their instances

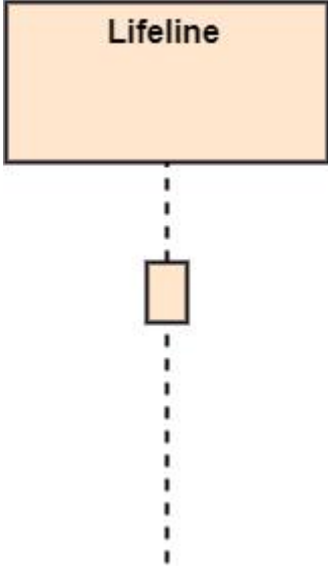

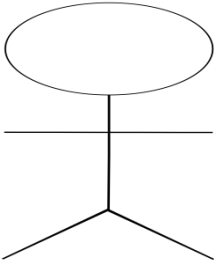

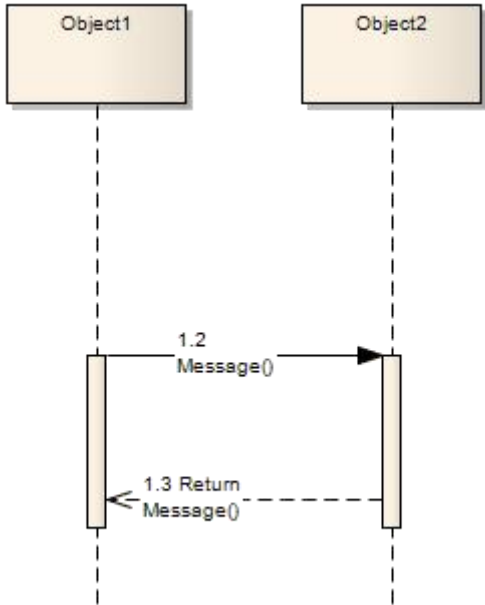

TABLE 3: Concept of a Class Diagram

❖ SEQUENCE DIAGRAM OF WEBUSER USE CASE DESCRIBED IN THE PREVIOUS SECTION

Sequence Diagrams are interaction diagrams that detail how operations are carried out. They capture the interaction between objects in the context of collaboration. Sequence Diagrams are time

focus and they show the order of the interaction visually by using the vertical axis of the diagram to represent time, messages sent, and when they are been send.

➤ Sequence Diagram Concept

Notation	Description	Graphical Representation
Lifeline	A lifeline represents individual participant in an interaction	
Actor	An actor represents the roles played by human users, external hardware or other subjects	
Call Message	Call message is a kind of message that represents an invocation of operation of target lifeline	

Create Message

Create message is a kind of message that represents the target of lifeline

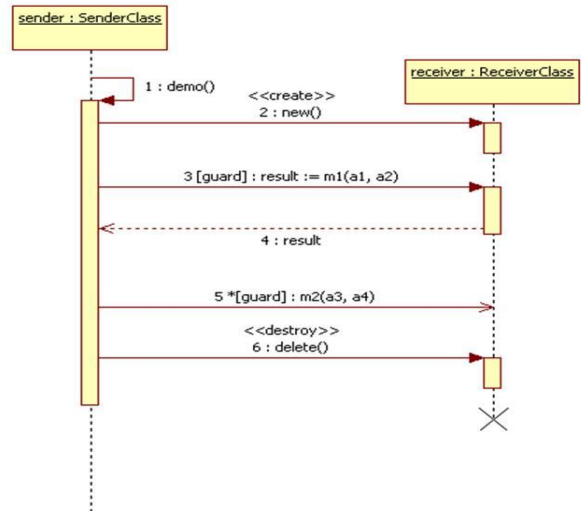

TABLE 4: Concepts of a Sequence Diagram

➤ Construction of Sequence Diagram

Here we will only represent the login sequence diagram of our main actor.

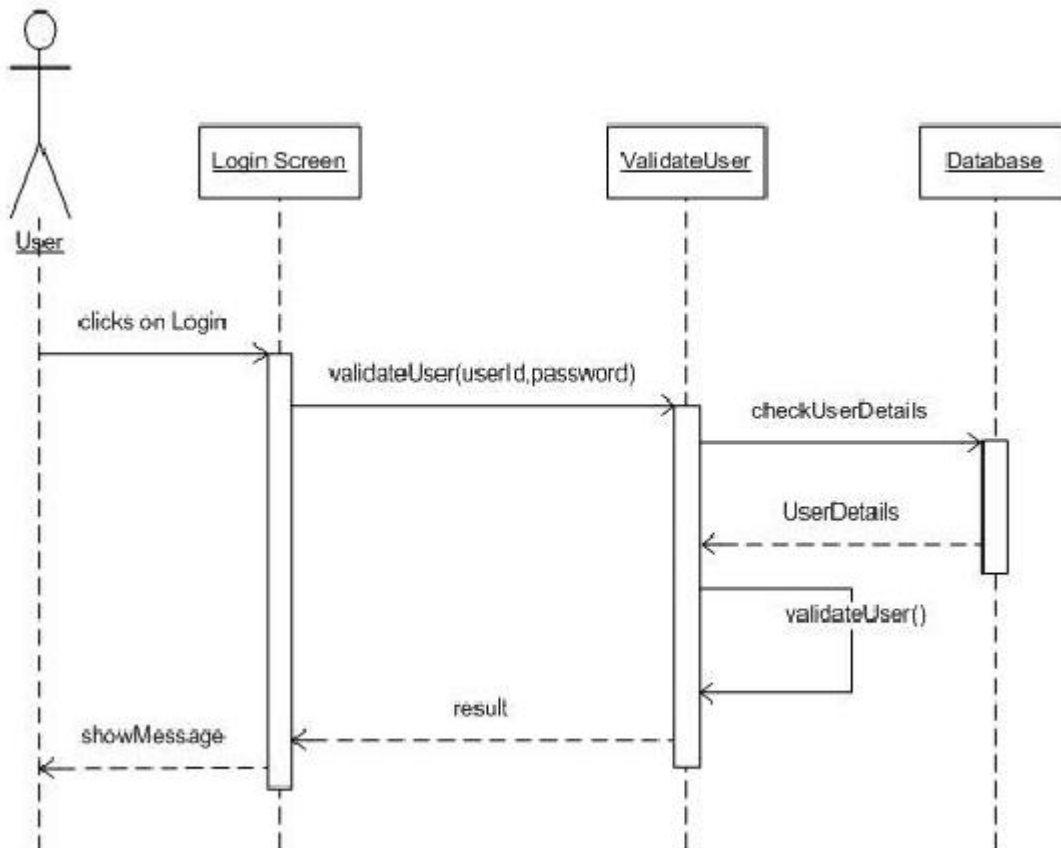

FIGURE 8: Sequence Diagram of User Login

3.3. INTERPRETATION OF RESULTS

After designing, drafting, modelling and coding, implementation is then necessary. The system was installed on a PC for a starter and the following images show the installation phase, as well as the various Front and Backend results:

❖ REGISTRATION TABLE FROM DATABASE

3.3.1. RESULTS OBTAINED

❖ HOME PAGE

Here the web user have the possibility to view different service of the page with the header

The screenshot displays the 'MyProperty' website's home page. At the top, a dark header bar contains the 'MyProperty' logo on the left and a 'Post Property' button with a paper plane icon on the right. Below this, a navigation bar features links for 'My Listings', 'Options', and 'Help', each with a dropdown arrow. On the right side of this bar are links for 'Saved' (with a heart icon) and 'Account' (with a dropdown arrow). The main content area has a scenic background image of a lake and mountains under a starry night sky. Overlaid on this is a white search form titled 'Find Your Perfect Home'. The form includes an 'Enter Location' field with a sub-label 'Enter City Name'. Below this are two dropdown menus for 'Property Type' (currently set to 'Flat') and 'Offer Type' (currently set to 'Sale'). At the bottom of the form are two input fields for 'Minimum Budget' and 'Maximum Budget', each with a small upward arrow icon. A prominent blue button labeled 'Search Property' is positioned at the very bottom of the search form.

3.3.2. TESTING

Software testing is an investigation conducted to provide stakeholders with information about the quality of the product or service under test. Software testing can also provide an objective, independent view of the software to allow the business to appreciate and understand the risks of software implementation.

- ❖ Responds correctly to all kinds of inputs,
- ❖ Perform its functions within an acceptable time,
- ❖ It is sufficiently usable.

CHAPTER FOUR: LEARNING OUTCOMES AND RECOMMENDATIONS

4.1. STRENGTH OF THE COMPANY

Soft Technologies has a better preparation of young people for future work and better wellbeing. Some of the strengths of the company are:

- ❖ Promote Employability
- ❖ Promote Entrepreneurship
- ❖ Improve Professionalism
- ❖ Innovation and Creativity
- ❖ Cultural Diversity
- ❖ Teach people how to block and manage their time
- ❖ Strong Networking and Collaborations

4.2. WEAKNESSES OF THE COMPANY

Though Soft Technologies possess many strengths, they also face certain weaknesses and challenges that can impact their growth and competitiveness in the tech industry. Here are some common weaknesses of the company:

- ❖ Skill Shortages
- ❖ Limited access to fund
- ❖ Limited access to the market due to low advertisement
- ❖ Limited research and development investment
- ❖ Competition with other larger companies

4.3. RECOMMENDATIONS TO AMELIORATE THE WEAKNESSES OF THE COMPANY

Addressing these weaknesses requires some strategic planning:

- ❖ Market expansion, which is doing more advertisement
- ❖ Collaborations with other larger companies
- ❖ Infrastructure improvement

GENERAL CONCLUSION

During the course of my internship, I had a better understanding on Python, PHP and what a database is all about. The project assigned to me pushed me to do a lot of research and learnt to me how to find solutions to problem by myself. And due to that I had a slight advanced knowledge on it compared to my classmates. Upon the realization of this project I learnt how to help others with my own knowledge, do research, and deepen my knowledge in PHP and database.

One of the thing I liked the most was the fact that my professional supervisor rather than helping me in coding when I was blocked, oriented me on where to put my attention and how to search results on my own. This online real estate system is just a way to tell myself that with the CRUD application I could make, something greater could be made following the same will and determination I used to build this system.

In the modern world of technology, computers are affecting our lives in more ways than we probably. The main objective of this internship was to acquire professional skills, identify a problem, propose a solution and implement the solution. Thus I came up with an ONLINE REAL ESTATE SYSTEM that provides a database from which users can easily assess and post real estates of their likings. It was not easy to develop this system since I was not well versed with the programming languages needed, I had to carry out personal research to meet up with the skills needed by the system.

And lastly I could actually show to my supervisor that not having knowledge on something doesn't mean that you cannot do the thing but instead it is the will and determination you have which defines exactly what you can do.
