INTERNSHIP REPORT ON

WORK CARRIED OUT DURING A SIX-MONTH INTERNSHIP AT THE NATIONAL SOCIAL INSURANCE FUND (NSIF) CAMEROON

A report based on an internship carried out from the 18th of September 2025 to the 18th of March 2026 submitted to the National Social Insurance Fund in fulfillment of the requirements for the award of an Internship Attestation

Written And Presented By:

AWARA DIANA TENGWI

YEAR 2025 / 2026

CERTIFICATION

This is to certify that this report was written by **AWARA DIANA TENGWI** and accepted as fulfillment of the requirements for the award of an Internship Attestation carried out at the National Social Insurance Fund (NSIF).

It is hereby approved by:

Name: _____

Position: _____

Signature: _____

Date: _____

ACKNOWLEDGEMENTS

First, I would like to express my sincere gratitude to the General Director of the National Social Insurance Fund for granting me the privilege of completing my professional internship within this esteemed organization. I am equally grateful to the Social Security Office of Bonanjo for their warm welcome throughout these six months, particularly through Mr. MBATOURA Sinclair and his deputy, Mr. NKONGO Cyrille, who exemplify true professionalism.

I would also like to extend my heartfelt thanks to the various departments that supported me:

- ❖ **The Total Office Service**, led by Mr. MENGUE and his team, for their friendly and welcoming reception at the beginning of my internship, which helped me integrate seamlessly.
- ❖ **The Accounting Service**, under Mr. BENGONO and his team, for guiding me in understanding the mechanisms of social security.
- ❖ **The General Affairs and Human Resources Service**, for instilling a sense of duty and discipline through Mrs. OUBILITEK and later Mrs. MINLANGA, and for the entire team's support, kindness, and diligence during challenging moments.
- ❖ **The Employer Control and Litigation Service**, with Mrs. MBALLA, Mrs. NDEDI, and the team, for providing invaluable professional and social learning experiences.
- ❖ Lastly, I wish to thank the entire team of the Regional Directorate for the Centre, South, and West for their continuous support.

ABSTRACT

This report presents a comprehensive analysis of professional practices observed during an internship at the National Social Insurance Fund (NSIF). The internship provided firsthand exposure to the institution's administrative, digital, and client service operations, with a particular focus on archive management, Total Office Service processes, and the usage of the Sapelli Aina digital application. Through systematic observation, task execution, and data collection, the study identified critical operational challenges, including reliance on manual processes, inefficiencies in record management, limited digital adoption among clients, and infrastructural constraints affecting service delivery. A detailed root-cause analysis highlighted the impact of these weaknesses on workflow efficiency, client satisfaction, and overall institutional performance. The report further presents structured proposals for improvement, emphasizing the integration of scalable digital solutions, optimization of internal processes, enhanced staff training, and proactive user engagement strategies. These recommendations aim to strengthen operational efficiency, reduce administrative bottlenecks, and support NSIF in achieving a fully integrated, reliable, and client-centered service model. This report demonstrates the application of professional analytical skills in a real-world organizational context, providing actionable insights that contribute to both personal development and institutional enhancement.

GENERAL CONCLUSION	21

GENERAL INTRODUCTION

Social protection, a true foundation of social cohesion and a guarantor of universal human dignity, has, over the decades, established itself as an intrinsic component of the development model of modern societies. Beyond being a simple safety net designed to absorb existing shocks and assist the most vulnerable populations, it represents a strategic investment in human capital, promoting the health, education, and economic security of citizens. In a world undergoing profound and accelerated transformations, the relevance and resilience of social protection systems are constantly being called into question. More than ever, it is imperative to rethink the methods of financing and managing these systems in order to ensure their long-term viability and their ability to meet the evolving needs of populations.

At the heart of this complex equation, the collection of social security contributions emerges as an essential mechanism, ensuring the financial sustenance of social security schemes and ultimately enabling the realization of fundamental social rights. These contributions, deducted from wages, constitute the main source of financing for social protection in most countries and are treated as state claims, benefiting from a privilege that comes immediately after that of the treasury, as defined in Article 175 of Ordinance No. 62/OF/4 of February 7, 1962. They contribute to financing a wide range of benefits, from family allowances to retirement pensions, including sickness benefits and coverage in the event of workplace accidents. They represent an inter-generational pact, in which active workers contribute to financing benefits paid to inactive individuals, while at the same time building up rights for their own future protection. The ability of social security institutions to effectively collect these contributions is therefore directly linked to their capacity to fulfill their obligations to citizens and ensure the continuity of basic public services.

However, the collection of social security contributions is a complex process, faced with a multitude of challenges whose nature and scope vary considerably depending on national contexts and the specific characteristics of social protection systems. In developed countries, where the formal sector of the economy is generally well structured and administrative institutions are robust, the challenges often focus on combating fraud and social evasion, as well as adapting contribution systems to new forms of employment (self-employment, digital platforms). In developing countries, on the other hand, the challenges are often more structural, linked to the size of the informal sector, weak administrative capacities, lack of public awareness, and procedural complexity.

The informal sector, characterized in some cases by undeclared and unregulated economic activities, represents a major obstacle to the collection of social security contributions in many countries such as Cameroon. Informal workers, often employed in small businesses or engaged in independent activities, generally fall outside contribution systems, thereby depriving social security schemes of crucial financial resources. Moreover, the precarious and unstable nature of these jobs makes contribution collection particularly difficult, requiring innovative approaches adapted to realities on the ground. The complexity of administrative procedures also constitutes a significant barrier to contribution collection. Unclear forms, cumbersome procedures, and a lack of coordination between the various involved institutions can discourage employers and workers from complying with their obligations, thereby encouraging non-payment of contributions. Simplifying and digitizing administrative procedures therefore appear as essential levers to improve collection efficiency and reduce management costs.

Beyond challenges related to economic structure and procedural complexity, the collection of social security contributions also faces issues of governance and awareness. Fraud and tax evasion, whether committed by businesses or individuals, represent a significant loss of revenue for social security systems. Combating these fraudulent practices requires rigorous controls in accordance with Principle No. 8 of the COSO (Committee of Sponsoring Organizations of the Tread way

Commission) Internal Control Integrated Framework, deterrent sanctions, and close cooperation between the various stakeholders involved (tax authorities, banks, and the judiciary). Furthermore, the lack of awareness among employers and workers regarding the benefits of social contributions and the consequences of non-payment constitutes a major obstacle. Targeted information campaigns, adapted to different contexts and using appropriate communication channels, are essential to promote a culture of social responsibility and encourage compliance with social contribution obligations.

In the face of these persistent challenges, optimizing the collection of social security contributions has become an absolute priority to ensure the sustainability and fairness of social protection systems. It is crucial to rethink collection strategies by taking into account the specificities of each national context and socio-economic developments. Technological innovation, simplification of procedures, strengthening administrative capacities, inter-agency cooperation, public awareness, and the fight against fraud are all avenues to be explored to improve collection efficiency and ensure sustainable financing of social security schemes.

This report presents a detailed account and critical analysis of a six-month professional internship carried out at NSIF Douala precisely at the social security office of Bonanjo. It examines the organizational structure, activities performed, challenges encountered, and proposes actionable improvements aimed at enhancing operational efficiency and digital transformation.

CHAPTER 1: OVERVIEW OF THE NATIONAL SOCIAL INSURANCE FUND (NSIF)

1.1 General Presentation of NSIF

The National Social Insurance Fund (NSIF) is a Cameroonian public institution endowed with legal personality and financial autonomy. Its primary role is to provide quality social benefits and ensure the effective collection of social contributions across the entire national territory. The institution works toward achieving universal access to social security. To accomplish this, it must maximize the collection of social contributions in order to effectively meet the needs of its beneficiaries and ensure the sustainability of its operations.

1.2 Historical Background of NSIF

1.2.1 Social Security Before Independence

The social protection system in Cameroon dates back to the colonial period. It was first marked by the decree of November 17, 1937, which established the principle of direct compensation for workplace accidents by employers. However, this system was discriminatory, as it excluded indigenous workers and provided minimal compensation. In 1944, the decree of January 7 introduced a system for compensating occupational accidents and diseases, although inequalities persisted. In 1945, France established a social benefits compensation fund headquartered in Douala, but discriminatory practices remained unchanged.

On December 15, 1952, the Labor Code expanded coverage of occupational risks to all workers. Later, the decree of February 24, 1957 formalized this system by placing responsibility on employers, who paid contributions to private insurance organizations. Although benefits were standardized by authorities, the system closely reflected the French social protection model. This period also marked the introduction of the pension system based on the principle of redistribution, where active workers contribute to finance the benefits of retirees.

1.2.2 Social Protection After Independence

Following independence and reunification, Cameroon aligned its social security system with international standards, particularly those of the International Labour Organization (ILO), of which it became a member in 1960.

This alignment resulted in several legislative reforms:

1. **Law No. 67/LF/07 of June 12, 1967:** Established the family benefits system, including family allowances, prenatal and maternity benefits.
2. **Law No. 67/LF/08 of June 12, 1967:** Created NSIF as an autonomous body responsible for managing family benefits.
3. **Law No. 69/LF/18 of November 10, 1969:** Introduced pension insurance for old age, disability, and death.
4. **Ordinance No. 73/17 of May 22, 1973:** Reorganized social security and entrusted its management to CNPS.
5. **Law No. 77/11 of July 13, 1977:** Assigned NSIF the management of occupational risks, replacing private insurance companies.

1.3 Legal Status and Organizational Structure

1.3.1 Legal Status

The National Social Insurance Fund has evolved significantly since its creation. It transitioned from a compensation fund to a public institution with legal personality and financial autonomy. It was officially established on June 12, 1967, under Law No. 67/LF/08, which defined its organization and functioning. Later, by Decree No. 354/2018 of June 7, 2018, NSIF was formally recognized as a public establishment. The institution operates under the supervision of the Ministry of Labour and Social Security and is managed by a Board of Directors.

1.3.2 Organizational Structure

The organizational structure of NSIF is designed to ensure efficient management and effective service delivery. At the top is the Board of Directors, composed of representatives of the government, employers, and workers. Operational management is handled by the General Directorate, led by a General Director and a Deputy Director.

The main central departments include:

- a) Internal Audit and Control Department
- b) General Affairs Department
- c) Legal Affairs Department
- d) Finance and Accounting Department
- e) Human Resources Department

Each of these departments plays a critical role in ensuring the proper functioning of the institution.

1.3.3 Illustration of the Organizational Structure (Organigram)

ORGANIGRAMME

Figure 1: Organizational structure (organigram) of the National Social Insurance Fund

1.4 Products, Missions, and Objectives of NSIF

1.4.1 Products and Services

NSIF provides a wide range of social services aimed at ensuring the welfare of workers and their families.

a) Family Benefits

- Family allowances to support children's education and well-being
- Prenatal and maternity benefits for women
- Support for families with disabled children

b) Pensions (Old Age, Disability, Death)

- Retirement pensions for workers aged 60 and above
- Disability pensions for workers unable to continue working
- Survivor benefits for families of deceased workers

c) Occupational Risk Coverage

- Compensation for workplace accidents
- Coverage for occupational diseases
- Prevention programs to reduce workplace risks

1.4.2 Missions of NSIF

The mission of NSIF is to ensure social protection for workers subject to the Labour Code, including those in professional, agricultural, and domestic sectors through compulsory insurance. It also extends coverage to informal sector workers and self-employed individuals through voluntary insurance schemes.

Its key missions include:

1. **Payment of Social Benefits:** Ensuring financial support to beneficiaries through pensions, family benefits, and occupational risk coverage.
2. **Collection of Social Contributions:** Ensuring that employers comply with their obligations by collecting contributions necessary to finance social benefits.

1.4.3 Objectives of NSIF

NSIF aims to provide comprehensive and equitable social protection through the following objectives:

a) Ensuring Social Protection

- Providing healthcare coverage
- Offering insurance against illness and accidents
- Guaranteeing retirement pensions
- Providing financial support in case of death

b) Promoting Economic and Social Development

- Supporting businesses through social security systems
- Encouraging decent work conditions
- Enhancing productivity and economic growth

c) Improving Access to Healthcare

- Implementing prevention programs
- Financing healthcare projects
- Enhancing accessibility to medical services

1.5 Organization and Functioning of the Social Security Office of Bonanjo

1.5.1 General Organization

The NSIF operates through interconnected services under the authority of central management. Key departments include audit and control, legal affairs, finance, and human resources, all working together to ensure effective service delivery.

1.5.2 Operational Services at the Social Security Office of Bonanjo

a) Total Office Service

Created in 2016, this service acts as the primary interface with clients. It is responsible for receiving, guiding, and assisting users. It includes:

- Support staff
- Social security technicians
- Expense controllers

b) Employer Control and Litigation Service

This service ensures that employers comply with legal obligations related to social security. It includes:

- Investigators
- Controllers
- Enforcement agents
- Contribution auditors

c) Human Resources and Administrative Service

This service manages personnel and resources. It includes:

- Human resources management unit
- Archives and inventory unit
- Budget management unit

d) Accounting and Treasury Service

This service manages financial operations, including:

- Verification of technical expenses
- Validation of administrative and financial operations
- General and analytical accounting

These services operate collaboratively to ensure the efficient management of social security in Cameroon. It is within this operational framework that the internship was conducted.

CHAPTER 2: INTERNSHIP CONTEXT AND OBJECTIVES

2.1 Internship Context

The professional internship was carried out at the National Social Insurance Fund (NSIF), specifically at the social security office of Bonanjo in Douala, over a six-month period from September 18th 2025 to March 18th 2026. This period was particularly significant, as it coincided with a government initiative aimed at supporting families during the back-to-school season. Under this initiative, financial assistance was granted to parents for each child under the age of 21 through the NSIF system. As a result, the institution experienced a substantial increase in activity, particularly in departments responsible for client interaction, document verification, and data processing.

This context created a high-demand operational environment, characterized by:

- A significant influx of clients seeking assistance
- Increased workload in document processing and verification
- Greater reliance on digital tools such as the Sapelli Aina application
- Pressure on staff to maintain efficiency and service quality

The internship was therefore conducted under real operational stress conditions, providing valuable exposure to how large public institutions manage peak demand while maintaining service continuity. Furthermore, the internship involved rotation across multiple departments, including:

- The Human Resources and Archives unit
- The Total Office Service
- Interaction with processes linked to Employer Control and client verification

This multi-department exposure allowed for a comprehensive understanding of both internal administrative workflows and external service delivery mechanisms.

2.2 Objectives of the Internship

The internship was guided by both academic requirements and professional development goals. These objectives can be grouped into four main categories:

2.2.1 Understanding Organizational Functioning

One of the primary objectives was to gain a deep understanding of how the National Social Insurance Fund operates at both structural and operational levels. This included:

- Understanding the roles and interactions of different departments
- Observing decision-making and workflow processes
- Analyzing how services are delivered to clients

2.2.2 Acquisition of Practical Skills

The internship aimed to bridge the gap between theoretical knowledge and real-world application by engaging in practical tasks such as:

1. Classification and management of physical archives
2. Client assistance and document verification
3. Use of digital tools for identification and document submission

These activities contributed to the development of:

4. Administrative skills
5. Organizational abilities
6. Attention to detail

2.2.3 Development of Analytical and Problem-Solving Skills

Beyond task execution, the internship emphasized critical thinking by identifying operational challenges and proposing solutions. This involved:

- Observing inefficiencies in workflows
- Identifying recurring problems (e.g., file duplication, system limitations)
- Analyzing root causes of these issues

2.2.4 Contribution to Organizational Activities

The internship also aimed at actively contributing to the functioning of the institution through:

- Supporting daily operations in archives and client service units
- Assisting in document processing and classification
- Facilitating client interactions during peak periods

Through these contributions, the internship provided not only learning opportunities but also practical value to the institution.

CHAPTER 3: ACTIVITIES PERFORMED

This chapter presents a detailed description of the activities carried out during the internship at the National Social Insurance Fund (NSIF), social security office of Bonanjo. It outlines the tasks performed across different departments, the procedures followed, and the practical experience gained.

The internship was structured in three main phases:

1. Archive management
2. Client service operations
3. Archive insertion and storage

3.1 Activities in the Human Resources and Archives Department

3.1.1 Overview of the Department

The Human Resources and Archives unit is responsible for managing personnel records, administrative documents, and the physical storage of files related to insured individuals. A significant part of its operations involves maintaining and organizing physical records, which are essential for administrative verification and historical reference.

3.1.2 File Classification Process

During the first two months, the main task consisted of classifying files of insured individuals.

Procedure Followed

The classification process involved several steps:

1. **Sorting documents into categories**

Files were grouped based on insured numbers into:

1. Tens
2. Hundreds
3. Thousands
4. Millions

2. **Chronological arrangement**

Within each category, files were arranged in ascending order (from smallest to largest insured number).

3. **Preparation for storage**

After classification, files were prepared for insertion into archive boxes.

3.1.3 Tasks Performed

- Sorting and organizing large volumes of files
- Identifying insured numbers and grouping documents accordingly
- Assisting in maintaining order within archive storage

On average, 80 to 120 files were processed daily, depending on workload.

3.1.4 Challenges Encountered

- Presence of damaged or deteriorated files
- Scattered documents belonging to the same individual
- Duplicate files with identical insured numbers

3.1.5 Solutions Implemented

- Replacement of damaged files with new or recycled folders
- Regrouping scattered documents into a single file
- Merging duplicate files to ensure consistency

3.2 Activities at the Total Office Service

3.2.1 Overview of the Department

The Total Office Service is the main point of interaction between NSIF and its clients. It is responsible for receiving, guiding, and assisting users with administrative procedures.

3.2.2 Client Assistance and Document Processing

During the second phase (two months), activities focused on assisting clients with:

- Identification procedures
- Submission of required documents
- Verification of insured status

On average, 25 to 40 clients were attended to daily, especially during peak periods.

3.2.3 Use of the Sapelli Aina Application

A major part of the work involved assisting clients in using the Sapelli Aina application.

For Active Workers

The process included:

- Logging into the application using:
 - Insured number
 - Award code
 - Access code
- Verifying personal and dependent information
- Uploading required documents such as:
 - School attendance certificates
 - Medical certificates
 - Child life certificates

For Retirees

The application was used for identification procedures:

- Verification using national ID and required documents
- Annual or biannual identification depending on age
- Confirmation of pension eligibility

3.2.4 Observed Difficulties

- Clients lacking compatible mobile devices
- Network connectivity issues
- Clients forgetting login credentials
- Missed identification deadlines by retirees

3.3 Final Phase: Archive Insertion and Storage

3.3.1 Description of the Process

The final two months focused on the insertion of classified files into archive storage systems.

3.3.2 Procedure Followed

- Identification of the appropriate carton box based on insured number intervals
- Placement of files in chronological order within each box
- Storage of boxes in designated shelves and compartments

3.3.3 Challenges Encountered

- Overloaded carton boxes
- Misplaced files
- Incorrect ordering of documents

3.3.4 Solutions Implemented

- Redistribution of files to reduce overcrowding
- Reorganization of files into correct order
- Relocation of misplaced files to appropriate boxes

3.4 Skills Acquired During the Internship

The internship contributed significantly to the development of both technical and professional skills, including:

Technical Skills

- File management and archival systems
- Use of digital applications for administrative processes
- Data organization and verification

Professional Skills

- Time management under high workload
- Communication with clients
- Problem-solving in real operational contexts

3.5 Summary of Activities

The internship provided a balanced exposure to:

- Administrative operations
- Client service processes
- Digital system usage

This combination allowed for a comprehensive understanding of how the National Social Insurance Fund functions at both operational and service levels.

CHAPTER 4: CRITICAL ANALYSIS OF OPERATIONS AT THE NATIONAL SOCIAL INSURANCE FUND (NSIF)

This chapter presents a critical evaluation of the operations observed during the internship at the National Social Insurance Fund (NSIF), with particular emphasis on administrative processes, digital systems, and service delivery. The analysis is based on direct involvement in archive management, client service operations, and the use of digital tools such as the Sapelli Aina application.

4.1 Analysis of Archive Management System

4.1.1 Observed Practices

The archive system within the Human Resources department relies heavily on manual processes. Files are physically stored in folders and arranged in carton boxes based on insured numbers. The classification and insertion processes are performed manually, requiring significant time and human effort. During the internship, an average of 80 to 120 files per day were processed, highlighting the volume of documentation handled by the institution.

4.1.2 Identified Weaknesses

Several structural weaknesses were identified:

1. **Degradation of physical files:** Many documents were found in poor condition, making them difficult to handle and increasing the risk of permanent data loss.
2. **Duplication of records:** Multiple files containing the same information were discovered, indicating a lack of centralized data control.
3. **Disorganization of records:** Files were sometimes misplaced or not arranged in the correct chronological order.
4. **Storage limitations:** Some carton boxes were overloaded, reducing accessibility and increasing the risk of misplacement.

4.1.3 Root Cause Analysis

These issues can be attributed to:

- The absence of a digitized archive system
- Lack of automated indexing mechanisms
- High dependency on human intervention

4.1.4 Impact on Operations

The consequences of these weaknesses include:

- Slow document retrieval
- Increased workload for staff
- Higher probability of administrative errors

4.2 Analysis of the Total Office Service

4.2.1 Observed Practices

The Total Office Service serves as the main interface between NSIF and its clients. Activities include document verification, client identification, and assistance with digital tools. During peak periods, a maximum of 25 clients were attended to daily, reflecting high service demand.

4.2.2 Identified Weaknesses

1. **High dependency on physical presence:** Despite digital tools, many clients still need to visit the office.
2. **Client unpreparedness:** Some clients arrive without required documents or login credentials.
3. **Process delays:** Verification and processing can be slowed by missing or incorrect information.

4.2.3 Root Cause Analysis

- Limited user awareness and education
- Incomplete digital adoption
- Lack of automated validation systems

4.2.4 Impact on Service Delivery

- Increased waiting time
- Staff overload during peak periods
- Reduced overall efficiency

4.3 Analysis of Digital System: Sapelli Aina

4.3.1 Operational Role

The Sapelli Aina application is a key component of NSIF's digital transformation strategy. It enables:

- Remote identification of retirees
- Online submission of documents by active workers

4.3.2 Identified Weaknesses

1. **Device incompatibility:** Not all smartphones support the application.
2. **Network dependency:** Operations are interrupted by poor internet connectivity.
3. **Lack of notification system:** Users are not reminded of important deadlines.

4.3.3 Technical Interpretation

From a systems perspective, the application appears to follow a centralized architecture, where all processes depend on real-time connectivity with central servers. This design introduces a single point of failure, particularly in environments with unstable internet infrastructure.

Additionally, the lack of compatibility across devices suggests insufficient optimization for diverse hardware environments, limiting accessibility.

4.3.4 Impact on Users

- Missed identification deadlines by retirees
- Delays in document processing
- Increased dependency on physical visits to NSIF offices

4.4 Analysis of Workload and Operational Pressure

4.4.1 Observations

The internship period coincided with a government grant initiative, leading to a significant increase in client activity. This resulted in:

- High volume of client interactions
- Increased pressure on staff
- Extended processing times

4.4.2 Key Issues

- Lack of scalable systems to handle peak demand
- Limited automation of repetitive tasks
- Insufficient resource allocation during high-demand periods

4.4.3 Impact

- Reduced service quality
- Increased stress on personnel
- Higher likelihood of errors

4.5 Overall Systemic Evaluation

Based on the observations, the operations at NSIF can be described as a hybrid system, combining manual processes with partial digital solutions.

Key Strengths

- Introduction of digital tools such as Sapelli Aina
- Structured organizational framework
- Dedicated workforce

Key Weaknesses

- Over-reliance on manual processes
- Incomplete digital transformation
- Limited user engagement strategies
- Infrastructure constraints

4.5.1 Strategic Insight

The main challenge facing NSIF is not the absence of digital tools, but rather the lack of full integration and optimization of these tools within existing workflows. Without addressing this gap, the institution risks maintaining inefficiencies despite technological investments.

4.6 Link Between Observations and Improvement Needs

The issues identified across departments point to three major areas requiring attention:

1. **Digital Infrastructure** – Improve system reliability and accessibility
2. **Process Optimization** – Reduce reliance on manual operations

3. User Engagement – Enhance awareness and adoption of digital tools

CHAPTER 5: STRUCTURED PROPOSALS FOR IMPROVEMENT

Based on the challenges identified during the internship, several structured proposals are presented to enhance operational efficiency, improve service delivery, and support NSIF's digital transformation.

5.1 Proposal 1: Provision of Dedicated Operational Devices

Problem Identified

Many clients, particularly retirees, do not possess compatible mobile devices required to use the Sapelli Aina application. This limits access to digital services and increases dependency on physical visits.

Proposed Solution

NSIF should provide dedicated devices (smartphones) at service points to assist clients in:

- Identification procedures
- Document submission
- Application access

Expected Impact

- Improved accessibility to digital services
- Reduced delays caused by device incompatibility
- Enhanced user experience

5.2 Proposal 2: Implementation of a Dual Internet System

Problem Identified

Frequent network disruptions significantly affect the functioning of digital operations.

Proposed Solution

NSIF should implement a redundant internet system using multiple service providers such as MTN Group and CAMTEL.

Expected Impact

- Reduced system downtime
- Increased reliability of digital services
- Improved operational continuity

5.3 Proposal 3: Integration of a Notification and Reminder System

Problem Identified

Retirees often forget their identification schedules, leading to suspension of pension payments.

Proposed Solution

Integrate an automated notification system within the Sapelli Aina application to:

- Remind users of upcoming identification periods
- Send alerts via push notifications or SMS

Expected Impact

- Reduced missed deadlines
- Improved compliance with identification requirements
- Increased user engagement

GENERAL CONCLUSION

This professional internship at the National Social Insurance Fund provided an in-depth understanding of the functioning of a major public institution responsible for social security in Cameroon. The experience highlighted the coexistence of traditional administrative systems and emerging digital solutions, revealing a gap between technological adoption and operational optimization. While NSIF has made significant progress in introducing digital tools such as the Sapelli Aina application, several challenges remain in terms of accessibility, infrastructure, and user adaptation. Through active participation in various departments, the internship contributed to the development of practical, analytical, and professional skills. It also provided an opportunity to critically assess existing systems and propose actionable improvements. Overall, this experience served as a bridge between academic training and professional practice, equipping the intern with the competencies required to operate effectively in complex organizational environments and contribute to continuous improvement initiatives.
